

Major Changes in Technology

Welcome to the Cloud

Workday is an entirely browser-based system that lives in the cloud. The cloud makes it easier to store and access information efficiently and safely, and reduces the risk of operational failure. It also means that the system will receive regular updates so that WSU is always using the latest and greatest ERP technology.

We're Mobilizing

Users will be able to access Workday and complete selected business processes and Employee and Manager Self-Service functions from their mobile devices, meaning business can move forward anytime, anywhere.

Goodbye, Greenbar

Workday's cloud-based reporting and data management functionality means that users no longer have to print miles of greenbar reports or stacks of paper to review and store key information. Departments can also scan and upload paper documents to be stored in the cloud.

Multi-factor Authentication

WSU's new multi-factor authentication (MFA) protocol promotes improved security, and Single Sign-On (SSO) makes it possible for WSU employees to access their applications and systems with one set of login credentials. Logging in will be smoother and safer.
